

# COPPERHEAD™ CARBIDE TIP CUTTERS

**Additional Sizes**

Copperhead™ Carbide Tip Cutters offer extended tool life on abrasive, tough-to-cut materials and in high-speed mag drills such as the HMD508. The unique Hougen design includes a special tooth geometry that helps maintain a better chip flow than other brands. Using the set screw arbor system can result in up to **2x** the tool life as tool-less systems. Copperhead Cutters are available with two different shanks. The standard 3/4" two flat shank and the Fusion shank.
